

AXA Global Equity Managed Volatility Portfolio – Class IA and IB Shares

Summary Prospectus dated May 1, 2018

Before you invest, you may want to review the Portfolio’s Prospectus, which contains more information about the Portfolio and its risks. The Portfolio’s current Prospectus and Statement of Additional Information (“SAI”), dated May 1, 2018, as may be amended or supplemented from time to time, and the Portfolio’s audited financial statements included in its annual report to shareholders dated December 31, 2017, are incorporated by reference into this Summary Prospectus. You can find the Portfolio’s Prospectus, SAI and other information about the Portfolio online at www.axa-equitablefunds.com/allportfolios.aspx. You can also get this information at no cost by calling 1-877-222-2144 or by sending an e-mail request to service@axa.us.com. This Summary Prospectus is intended for use in connection with a variable contract as defined in Section 817(d) of the Internal Revenue Code (“Contracts”) and certain other eligible investors and is not intended for use by other investors.

Investment Objective: Seeks to achieve long-term capital appreciation with an emphasis on risk-adjusted returns and managing volatility in the Portfolio.

FEES AND EXPENSES OF THE PORTFOLIO

The following table describes the fees and expenses that you may pay if you buy and hold shares of the Portfolio. The table below does not reflect any fees and expenses associated with variable life insurance contracts and variable annuity certificates and contracts (“Contracts”), which would increase overall fees and expenses. See the Contract prospectus for a description of those fees and expenses.

Shareholder Fees (fees paid directly from your investment)
Not applicable.

Annual Portfolio Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)		
AXA Global Equity Managed Volatility Portfolio	Class IA Shares	Class IB Shares
Management Fee	0.72%	0.72%
Distribution and/or Service Fees (12b-1 fees)	0.25%	0.25%
Other Expenses	0.18%	0.18%
Total Annual Portfolio Operating Expenses	1.15%	1.15%

Example

This Example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other portfolios. The Example assumes that you invest \$10,000 in the Portfolio for the periods indicated, that your investment has a 5% return each year and that the Portfolio’s operating expenses remain the same. This Example does not reflect any Contract-related fees and expenses including redemption fees (if any) at the Contract level. If such fees and expenses were reflected, the total expenses would be higher. Although your actual costs may be higher or lower, based on these assumptions, whether you redeem or hold your shares, your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class IA Shares	\$117	\$365	\$633	\$1,398
Class IB Shares	\$117	\$365	\$633	\$1,398

PORTFOLIO TURNOVER

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Portfolio’s performance. During the most recent fiscal year, the Portfolio’s portfolio turnover rate was 10% of the average value of the Portfolio.

INVESTMENTS, RISKS, AND PERFORMANCE

Principal Investment Strategy: The Portfolio’s assets normally are allocated between two or more investment managers, each of which will manage its portion of the Portfolio using a different but complementary investment strategy. One portion of the Portfolio is actively managed (“Active Allocated Portion”); the other portion of the Portfolio seeks to track the performance of a particular index or indices (“Index Allocated Portion”). Under normal circumstances, the Portfolio invests at least 80% of its net assets, plus borrowings for investment purposes, in equity securities. This Portfolio’s investments in equity securities may include common stocks, preferred stocks, warrants, depositary receipts, and other equity securities, and financial instruments that derive their value from such securities. The Active Allocated Portion consists of approximately 30% of the Portfolio’s net assets and the Index Allocated Portion consists of approximately 70% of the Portfolio’s net assets. These percentages are targets established by the Adviser; actual allocations may deviate from these targets.

Under normal circumstances, the Portfolio invests primarily in equity securities of foreign companies, including emerging market equity securities. The Portfolio also may invest in equity securities of issuers located in North America and other developed countries.

For this Portfolio, an emerging market country is any country that the International Bank for Reconstruction and Development (commonly known as “The World Bank”) or similar major financial institution has determined to have a low or middle economy, or countries included in the MSCI Emerging Markets Index (“MSCI EM”). In addition, for this Portfolio, an emerging market country security is defined as a security of an issuer having one or more of the following characteristics:

- its principal securities trading market is in an emerging market or developing country;

- alone or on a consolidated basis, at least 50% of its annual revenues or profits are derived from goods produced, sales made or services performed in an emerging market country or developing country or has at least 50% of its assets in emerging markets countries; or
- it is organized under the laws of, or has a principal office in, an emerging market or developing country.

The Active Allocated Portion invests primarily in equity securities of U.S. and non-U.S. companies that, in the view of the Sub-Advisers, have good prospects for future growth. Other factors, such as country and regional factors, are considered by the Sub-Advisers. The Active Allocated Portion's Sub-Advisers may sell a security for a variety of reasons, such as to make other investments believed by a Sub-Adviser to offer superior investment opportunities.

The Active Allocated Portion's investment process takes into account information about environmental, social and governance issues (also referred to as ESG) when making investment decisions. The Sub-Adviser focuses on engaging company management around corporate governance practices as well as what the Sub-Adviser deems to be materially important environmental and/or social issues facing a company.

The Index Allocated Portion of the Portfolio is comprised of three strategies, which seek to track the performance (before fees and expenses) of the Standard & Poor's 500 Composite Stock Index (the "S&P 500"), the MSCI EAFE Index ("MSCI EAFE"), and the MSCI EM, respectively, each with minimal tracking error. The Index Allocated Portion's assets will be allocated in approximately the following manner: 30-50% in each of the S&P 500 and MSCI EAFE and 10-30% in the MSCI EM. Each such strategy is commonly referred to as an indexing strategy. Generally, each portion of the Index Allocated Portion uses a full replication technique, although in certain instances a sampling approach may be utilized for a portion of the Index Allocated Portion. Each portion of the Index Allocated Portion also may invest in other instruments, such as futures and options contracts, that provide comparable exposure as the index without buying the underlying securities comprising the index.

AXA Equitable Funds Management Group, LLC ("FMG LLC" or the "Adviser") also may utilize futures and options, such as exchange-traded futures and options contracts on securities indices, to manage equity exposure. Futures and options can provide exposure to the performance of a securities index without buying the underlying securities comprising the index. They also provide a means to manage the Portfolio's equity exposure without having to buy or sell securities. When market volatility is increasing above specific thresholds set for the Portfolio, the Adviser may limit equity exposure either by reducing investments in securities, shorting or selling long futures and options positions on an index, increasing cash levels, and/or shorting an index. During such times, the Portfolio's exposure to equity securities may be significantly less than that of a traditional equity portfolio. Volatility is a statistical measure of the magnitude of changes in the Portfolio's returns, without regard to the direction of those changes. Higher volatility generally indicates higher risk and is often reflected by frequent and sometimes significant movements up and down in value. Volatility management techniques may reduce potential losses and/or mitigate financial risks to insurance companies that provide certain benefits and

guarantees available under the Contracts and offer the Portfolio as an investment option in their products. The Portfolio may invest up to 25% of its assets in derivatives. It is anticipated that the Portfolio's derivative instruments will consist primarily of exchange-traded futures and options contracts on securities indices, but the Portfolio also may utilize other types of derivatives. The Portfolio's investments in derivatives may be deemed to involve the use of leverage because the Portfolio is not required to invest the full market value of the contract upon entering into the contract but participates in gains and losses on the full contract price. The use of derivatives also may be deemed to involve the use of leverage because the heightened price sensitivity of some derivatives to market changes may magnify the Portfolio's gain or loss. The Portfolio may maintain a significant percentage of its assets in cash and cash equivalent instruments, some of which may serve as margin or collateral for the Portfolio's obligations under derivative transactions.

The Portfolio also may lend its portfolio securities to earn additional income.

Principal Risks: An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. You may lose money by investing in the Portfolio. Performance may be affected by one or more of the following risks.

The following risks are described in alphabetical order and not in order of importance or potential exposure.

Cash Management Risk: Upon entering into certain derivatives contracts, such as futures contracts, and to maintain open positions in certain derivatives contracts, the Portfolio may be required to post collateral for the contract, the amount of which may vary. As such, the Portfolio may maintain cash balances, including foreign currency balances, which may be significant, with counterparties such as the Trust's custodian or its affiliates. The Portfolio is thus subject to counterparty risk and credit risk with respect to these arrangements.

Derivatives Risk: The Portfolio's investments in derivatives may rise or fall in value more rapidly than other investments. Changes in the value of a derivative may not correlate perfectly, or at all, with the underlying asset, reference rate or index, and the Portfolio could lose more than the principal amount invested. Some derivatives can have the potential for unlimited losses. In addition, it may be difficult or impossible for the Portfolio to purchase or sell certain derivatives in sufficient amounts to achieve the desired level of exposure, which may result in a loss or may be costly to the Portfolio. Derivatives also may be subject to certain other risks such as leveraging risk, liquidity risk, interest rate risk, market risk, credit risk, the risk that a counterparty may be unable or unwilling to honor its obligations, management risk and the risk of mispricing or improper valuation. Derivatives also may not behave as anticipated by the Portfolio, especially in abnormal market conditions. Changing regulation may make derivatives more costly, limit their availability, impact the Portfolio's ability to maintain its investments in derivatives, disrupt markets, or otherwise adversely affect their value or performance.

Equity Risk: In general, stocks and other equity security values fluctuate, and sometimes widely fluctuate, in response to changes in a company's financial condition as well as general market, economic and political conditions and other factors.

Foreign Securities Risk: Investments in foreign securities, including depositary receipts, involve risks not associated with investments in U.S. securities. Foreign markets may be less liquid, more volatile and subject to less government supervision and regulation than U.S. markets. Security values also may be negatively affected by changes in the exchange rates between the U.S. dollar and foreign currencies. Differences between U.S. and foreign legal, political and economic systems, regulatory regimes and market practices also may impact security values, and it may take more time to clear and settle trades involving foreign securities. In addition, securities issued by U.S. entities with substantial foreign operations or holdings can involve risks relating to conditions in foreign countries.

Currency Risk: Investments in foreign currencies and in securities that trade in, or receive revenues in, or in derivatives that provide exposure to foreign currencies are subject to the risk that those currencies will decline in value relative to the U.S. dollar. Any such decline may erode or reverse any potential gains from an investment in securities denominated in foreign currency or may widen existing loss. In the case of hedging positions, there is the risk that the U.S. dollar will decline in value relative to the currency being hedged. Currency rates may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates, intervention (or the failure to intervene) by governments, central banks or supranational entities, or by the imposition of currency controls or other political developments in the U.S. or abroad.

Depositary Receipts Risk: Investments in depositary receipts (including American Depositary Receipts, European Depositary Receipts and Global Depositary Receipts) are generally subject to the same risks of investing directly in the foreign securities that they evidence or into which they may be converted. In addition, issuers underlying unsponsored depositary receipts may not provide as much information as U.S. issuers and issuers underlying sponsored depositary receipts. Unsponsored depositary receipts also may not carry the same voting privileges as sponsored depositary receipts.

Emerging Markets Risk: There are greater risks involved in investing in emerging market countries and/or their securities markets, and investments in these countries and/or markets are more susceptible to loss than investments in developed countries and/or markets. Investments in these countries and/or markets may present market, credit, currency, liquidity, legal, political, technical and other risks different from, or greater than, the risks of investing in developed countries. In addition, the risks associated with investing in a narrowly defined geographic area are generally more pronounced with respect to investments in emerging market countries.

European Economic Risk: The European Union's (the "EU") Economic and Monetary Union (the "EMU") requires

member countries to comply with restrictions on interest rates, deficits, debt levels, and inflation rates, and other factors, each of which may significantly impact every European country. The economies of EU member countries and their trading partners may be adversely affected by changes in the euro's exchange rate, changes in EU or governmental regulations on trade, and the threat of default or an actual default by an EU member country on its sovereign debt, which could negatively impact the Portfolio's investments and cause it to lose money. In recent years, the European financial markets have been negatively impacted by concerns relating to rising government debt levels and national unemployment; possible default on or restructuring of sovereign debt in several European countries; and economic downturns. A European country's default or debt restructuring would adversely affect the holders of the country's debt and sellers of credit default swaps linked to the country's creditworthiness and could negatively impact global markets more generally. Recent events in Europe may adversely affect the euro's exchange rate and value and may continue to impact the economies of every European country. In June 2016, the United Kingdom (the "UK") voted to withdraw from the EU, commonly referred to as "Brexit." The impact of Brexit is so far uncertain. The negative impact on not only the UK and European economies but also the broader global economy could be significant, potentially resulting in increased volatility and illiquidity, which could adversely affect the value of the Portfolio's investments. Any further withdrawals from the EU could cause additional market disruption globally.

Regulatory Risk: Less information may be available about foreign companies. In general, foreign companies are not subject to uniform accounting, auditing and financial reporting standards or to other regulatory practices and requirements as are U.S. companies. Many foreign governments do not supervise and regulate stock exchanges, brokers and the sale of securities to the same extent as does the United States and may not have laws to protect investors that are comparable to U.S. securities laws. In addition, some countries may have legal systems that may make it difficult for the Portfolio to vote proxies, exercise shareholder rights, and pursue legal remedies with respect to its foreign investments.

Futures Contract Risk: The primary risks associated with the use of futures contracts are (a) the imperfect correlation between the change in market value of the instruments held by the Portfolio and the price of the futures contract; (b) liquidity risks, including the possible absence of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses (potentially unlimited) caused by unanticipated market movements; (d) an investment manager's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that a counterparty, clearing member or clearinghouse will default in the performance of its obligations; (f) if the Portfolio has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin

requirements, and the Portfolio may have to sell securities at a time when it may be disadvantageous to do so; and (g) transaction costs associated with investments in futures contracts may be significant, which could cause or increase losses or reduce gains. Futures contracts are also subject to the same risks as the underlying investments to which they provide exposure. In addition, futures contracts may subject the Portfolio to leveraging risk.

Index Strategy Risk: The Portfolio employs an index strategy, that is, it generally invests in the securities included in its index or a representative sample of such securities regardless of market trends. The Portfolio generally will not modify its index strategy to respond to changes in the economy, which means that it may be particularly susceptible to a general decline in the market segment relating to the relevant index. In addition, although the index strategy attempts to closely track its benchmark index, the Portfolio may not invest in all of the securities in the index. Also, the Portfolio's fees and expenses will reduce the Portfolio's returns, unlike those of the benchmark index. Cash flow into and out of the Portfolio, portfolio transaction costs, changes in the securities that comprise the index, and the Portfolio's valuation procedures also may affect the Portfolio's performance. Therefore, there can be no assurance that the performance of the index strategy will match that of the benchmark index.

Large-Cap Company Risk: Larger more established companies may be unable to respond quickly to new competitive challenges such as changes in technology and consumer tastes. Many larger companies also may not be able to attain the high growth rate of successful smaller companies, especially during extended periods of economic expansion.

Leveraging Risk: When the Portfolio leverages its holdings, the value of an investment in the Portfolio will be more volatile and all other risks will tend to be compounded. For example, the Portfolio may take on leveraging risk when it engages in derivatives transactions (such as futures and options investments), invests collateral from securities loans or borrows money. The Portfolio may experience leveraging risk in connection with investments in derivatives because its investments in derivatives may be small relative to the investment exposure assumed, leaving more assets to be invested in other investments. Such investments may have the effect of leveraging the Portfolio because the Portfolio may experience gains or losses not only on its investments in derivatives, but also on the investments purchased with the remainder of the assets. If the value of the Portfolio's investments in derivatives is increasing, this could be offset by declining values of the Portfolio's other investments. Conversely, it is possible that a rise in the value of the Portfolio's non-derivative investments could be offset by a decline in the value of the Portfolio's investments in derivatives. In either scenario, the Portfolio may experience losses. In a market where the value of the Portfolio's investments in derivatives is declining and the value of its other investments is declining, the Portfolio may experience substantial losses.

Liquidity Risk: The Portfolio is subject to the risk that certain investments may be difficult or impossible for the Portfolio to purchase or sell at an advantageous time or price or in sufficient amounts to achieve the desired level of exposure. The Portfolio may be required

to dispose of other investments at unfavorable times or prices to satisfy obligations, which may result in a loss or may be costly to the Portfolio. Judgment plays a greater role in valuing illiquid investments than investments with more active markets. Certain securities that were liquid when purchased may later become illiquid, particularly in times of overall economic distress.

Mid-Cap and Small-Cap Company Risk: The Portfolio's investments in mid- and small-cap companies may involve greater risks than investments in larger, more established issuers because such companies generally are more vulnerable than larger companies to adverse business or economic developments. Such companies generally have narrower product lines, more limited financial and management resources and more limited markets for their securities as compared with larger companies. As a result, the value of such securities may be more volatile than the value of securities of larger companies, and the Portfolio may experience difficulty in purchasing or selling such securities at the desired time and price or in the desired amount. In general, these risks are greater for small-cap companies than for mid-cap companies.

Multiple Sub-Adviser Risk: The Adviser allocates the Portfolio's assets among multiple Sub-Advisers, each of which is responsible for investing its allocated portion of the Portfolio's assets. To a significant extent, the Portfolio's performance will depend on the success of the Adviser in allocating the Portfolio's assets to Sub-Advisers and its selection and oversight of the Sub-Advisers. The Sub-Advisers' investment strategies may not work together as planned, which could adversely affect the Portfolio's performance. In addition, because each Sub-Adviser manages its allocated portion of the Portfolio independently from another Sub-Adviser, the same security may be held in different portions of the Portfolio, or may be acquired for one portion of the Portfolio at a time when a Sub-Adviser to another portion deems it appropriate to dispose of the security from that other portion, resulting in higher expenses without accomplishing any net result in the Portfolio's holdings. Similarly, under some market conditions, one Sub-Adviser may believe that temporary, defensive investments in short-term instruments or cash are appropriate for its allocated portion of the Portfolio when another Sub-Adviser believes continued exposure to the equity or debt markets is appropriate for its allocated portion of the Portfolio. Because each Sub-Adviser directs the trading for its own portion of the Portfolio, and does not aggregate its transactions with those of the other Sub-Adviser, the Portfolio may incur higher brokerage costs than would be the case if a single Sub-Adviser were managing the entire Portfolio. In addition, while the Adviser seeks to allocate the Portfolio's assets among the Portfolio's Sub-Advisers in a manner that it believes is consistent with achieving the Portfolio's investment objective(s), the Adviser is subject to conflicts of interest in allocating the Portfolio's assets among Sub-Advisers, including affiliated Sub-Advisers, because the Adviser pays different fees to the Sub-Advisers and due to other factors that could impact the Adviser's revenues and profits.

Portfolio Management Risk: The Portfolio is subject to the risk that strategies used by an investment manager and its securities selections fail to produce the intended results.

Regulatory Risk: The Adviser is registered with the Securities and Exchange Commission ("SEC") as an investment adviser under the Investment Advisers Act of 1940, as amended. The Adviser also is registered with the Commodity Futures Trading Commission ("CFTC") as a commodity pool operator ("CPO") under the Commodity Exchange Act, as amended, and, due to the Portfolio's use of derivatives, serves as a CPO with respect to the Portfolio. Being subject to dual regulation by the SEC and the CFTC may increase compliance costs, which may be borne by the Portfolio and may affect Portfolio returns.

Responsible Investing Risk: Consideration of environmental, social and governance ("ESG") factors in the investment process may limit the types and number of investment opportunities available to the Portfolio, and therefore carries the risk that, under certain market conditions, the Portfolio may underperform funds that do not consider ESG factors. The integration of ESG considerations may affect the Portfolio's exposure to certain sectors or types of investments and may impact the Portfolio's relative investment performance depending on whether such sectors or investments are in or out of favor in the market. In addition, the Sub-Adviser may be unsuccessful in creating a portfolio that consists of companies that exhibit more positive ESG characteristics or a portfolio that assigns more weight to such companies.

Sector Risk: From time to time, based on market or economic conditions, the Portfolio may have significant positions in one or more sectors of the market. To the extent the Portfolio invests more heavily in particular sectors, its performance will be especially sensitive to developments that significantly affect those sectors. Individual sectors may be more volatile, and may perform differently, than the broader market. The industries that constitute a sector may all react in the same way to economic, political or regulatory events.

Securities Lending Risk: The Portfolio may lend its portfolio securities to seek income. There is a risk that a borrower may default on its obligations to return loaned securities, however, the Portfolio's securities lending agent may indemnify the Portfolio against that risk. The Portfolio will be responsible for the risks associated with the investment of cash collateral, including any collateral invested in an affiliated money market fund. The Portfolio may lose money on its investment of cash collateral or may fail to earn sufficient income on its investment to meet obligations to the borrower. In addition, delays may occur in the recovery of securities from borrowers, which could interfere with the Portfolio's ability to vote proxies or to settle transactions.

Short Position Risk: The Portfolio may engage in short sales and may enter into derivative contracts that have a similar economic effect (e.g., taking a short position in a futures contract). The Portfolio will incur a loss as a result of a short position if the price of the asset sold short increases between the date of the short position sale and the date on which an offsetting position is purchased. Short positions may be considered speculative transactions and involve special risks that could cause or increase losses or reduce gains, including greater reliance on the investment adviser's ability to accurately anticipate the future value of a security or instrument, potentially higher transaction costs, and imperfect correlation between the actual and desired level of exposure. Because the Portfolio's potential loss on a short position

arises from increases in the value of the asset sold short, the extent of such loss, like the price of the asset sold short, is theoretically unlimited.

Volatility Management Risk: The Adviser from time to time employs various volatility management techniques in managing the Portfolio, including the use of futures and options to manage equity exposure. Although these actions are intended to reduce the overall risk of investing in the Portfolio, they may not work as intended and may result in losses by the Portfolio or periods of underperformance, particularly during periods when market values are increasing but market volatility is high. The success of the Portfolio's volatility management strategy will be subject to the Adviser's ability to correctly assess the degree of correlation between the performance of the relevant market index and the metrics used by the Adviser to measure market volatility. Since the characteristics of many securities change as markets change or time passes, the success of the Portfolio's volatility management strategy also will be subject to the Adviser's ability to continually recalculate, readjust, and execute volatility management techniques in an efficient manner. In addition, market conditions change, sometimes rapidly and unpredictably, and the Adviser may be unable to execute the volatility management strategy in a timely manner or at all. Moreover, volatility management strategies may increase portfolio transaction costs, which could cause or increase losses or reduce gains. For a variety of reasons, the Adviser may not seek to establish a perfect correlation between the relevant market index and the metrics that the Adviser uses to measure market volatility. In addition, it is not possible to manage volatility fully or perfectly. Futures contracts and other instruments used in connection with the volatility management strategy are not necessarily held by the Portfolio to hedge the value of the Portfolio's other investments and, as a result, these futures contracts and other instruments may decline in value at the same time as the Portfolio's other investments. Any one or more of these factors may prevent the Portfolio from achieving the intended volatility management or could cause the Portfolio to underperform or experience losses (some of which may be sudden) or volatility for any particular period that may be higher or lower. In addition, the use of volatility management techniques may not protect against market declines and may limit the Portfolio's participation in market gains, even during periods when the market is rising. Volatility management techniques, when implemented effectively to reduce the overall risk of investing in the Portfolio, may result in underperformance by the Portfolio. For example, if the Portfolio has reduced its overall exposure to equities to avoid losses in certain market environments, the Portfolio may forgo some of the returns that can be associated with periods of rising equity values. The Portfolio's performance may be lower than the performance of similar funds where volatility management techniques are not used.

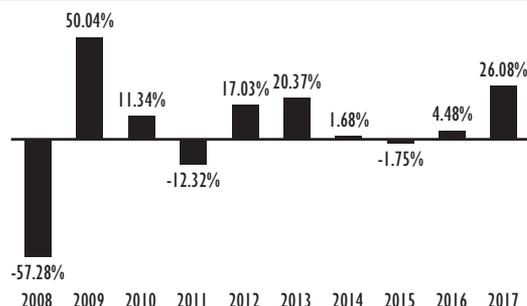

Risk/Return Bar Chart and Table

The bar chart and table below provide some indication of the risks of investing in the Portfolio by showing changes in the Portfolio's performance from year to year and by showing how the Portfolio's average annual total returns for the past one, five and ten years (or since inception) through December 31, 2017 compared to the returns

of a broad-based securities market index. The additional indexes show how the Portfolio's performance compared with the returns of other indexes that have characteristics relevant to the Portfolio's investment strategies, including volatility managed indexes. The return of the broad-based securities market index (and any additional comparative index) shown in the right hand column below is the return of the index for the last 10 years or, if shorter, since the inception of the share class with the longest history. Past performance is not an indication of future performance.

The performance results do not reflect any Contract-related fees and expenses, which would reduce the performance results.

Calendar Year Annual Total Returns — Class IB

Best quarter (% and time period) 26.02% (2009 2nd Quarter)
Worst quarter (% and time period) -30.61% (2008 4th Quarter)

Average Annual Total Returns

	One Year	Five Years	Ten Years/Since Inception
AXA Global Equity Managed Volatility Portfolio – Class IA Shares	26.09%	9.63%	1.58%
AXA Global Equity Managed Volatility Portfolio – Class IB Shares	26.08%	9.64%	1.49%
Volatility Managed Index – Global Blend (reflects no deduction for fees, expenses, or taxes)	23.46%	11.65%	6.61%
International Proxy Index (reflects no deduction for fees, expenses, or taxes)	24.36%	7.84%	1.67%
Volatility Managed Index – Global Proxy Blend (reflects no deduction for fees, expenses, or taxes)	23.19%	11.81%	6.79%
MSCI AC World (Net) Index (reflects no deduction for fees or expenses)	23.97%	10.80%	4.65%

WHO MANAGES THE PORTFOLIO

Investment Adviser: FMG LLC

Portfolio Managers: The members of the team that are jointly and primarily responsible for (i) the selection, monitoring and oversight of the Portfolio's Sub-Advisers, (ii) allocating assets among the Portfolio's Allocated Portions and (iii) managing the Portfolio's equity exposure are:

Name	Title	Date Began Managing the Portfolio
Kenneth T. Kozlowski, CFP®, CLU, ChFC	Executive Vice President and Chief Investment Officer of FMG LLC	May 2011
Alwi Chan, CFA®	Senior Vice President and Deputy Chief Investment Officer of FMG LLC	May 2009
Xavier Poutas, CFA®	Assistant Portfolio Manager of FMG LLC	May 2015
Miao Hu, CFA®	Assistant Portfolio Manager of FMG LLC	May 2016

Sub-Adviser: Morgan Stanley Investment Management, Inc. ("MSIM Inc.")

Portfolio Managers: The members of the team that are jointly and primarily responsible for the securities selection, research and trading for a portion of the Active Allocated Portion of the Portfolio are:

Name	Title	Date Began Managing the Portfolio
Ruchir Sharma	Managing Director of MSIM Inc.	August 2001
Paul Psaila	Managing Director of MSIM Inc.	August 1997
Eric Carlson	Managing Director of MSIM Inc.	October 2006
Munib Madni	Managing Director of Morgan Stanley Investment Management Company, an affiliate of MSIM Inc.	May 2012
Gaite Ali	Managing Director of MSIM Inc.	April 2013

Sub-Adviser: OppenheimerFunds, Inc. ("Oppenheimer")

Portfolio Managers: The members of the team that are jointly and primarily responsible for the securities selection, research and trading for a portion of the Active Allocated Portion of the Portfolio are:

Name	Title	Date Began Managing the Portfolio
Rajeev Bhaman, CFA®	Director of Global Equities and Senior Vice President of Oppenheimer	July 2013
John Delano, CFA®	Director of Equity Research of the Global Team, Senior Portfolio Manager and Vice President of Oppenheimer	May 2017

Sub-Adviser: BlackRock Investment Management, LLC ("BlackRock")

Portfolio Managers: The members of the team that are jointly and primarily responsible for the securities selection, research and trading for the Index Allocated Portion of the Portfolio are:

Name	Title	Date Began Managing the Portfolio
Alan Mason	Managing Director of BlackRock	March 2014
Greg Savage, CFA®	Managing Director and Portfolio Manager of BlackRock	May 2012
Rachel M. Aguirre	Director of BlackRock	April 2016
Creighton Jue, CFA®	Managing Director of BlackRock	April 2016

The Adviser has been granted relief by the Securities and Exchange Commission to hire, terminate and replace Sub-Advisers and amend sub-advisory agreements subject to the approval of the Board of Trustees and without obtaining shareholder approval. However, the Adviser may not enter into a sub-advisory agreement on behalf of the Portfolio with an "affiliated person" of the Adviser, such as AllianceBernstein L.P., unless the sub-advisory agreement is approved by the Portfolio's shareholders. The Adviser is responsible for overseeing Sub-Advisers and recommending their hiring, termination and replacement to the Board of Trustees.

PURCHASE AND REDEMPTION OF PORTFOLIO SHARES

The Portfolio's shares are currently sold only to insurance company separate accounts in connection with Contracts issued by AXA Equitable Life Insurance Company ("AXA Equitable"), AXA Life and Annuity Company, or other affiliated or unaffiliated insurance companies and to The AXA Equitable 401(k) Plan. Shares also may be sold to other tax-qualified retirement plans, to other portfolios managed by FMG LLC that currently sell their shares to such accounts and plans and to other investors eligible under applicable federal income tax regulations.

The Portfolio does not have minimum initial or subsequent investment requirements. Shares of the Portfolio are redeemable on any business day (which typically is any day the New York Stock Exchange is open) upon receipt of a request. All redemption requests will be processed and payment with respect thereto will normally be made within seven days after tender. Please refer to your Contract prospectus for more information on purchasing and redeeming Portfolio shares.

TAX INFORMATION

The Portfolio's shareholders are (or may include) insurance company separate accounts, qualified plans and other investors eligible under applicable federal income tax regulations. Distributions made by the Portfolio to such an account or plan, and exchanges and redemptions of Portfolio shares made by such an account or plan,

ordinarily do not cause the holders of underlying Contracts or plan participants or beneficiaries to recognize income or gain for federal income tax purposes at the time of the distributions, exchanges or redemptions; the holders, plan participants or beneficiaries generally are taxed only on amounts they withdraw from their Contract or plan. See the prospectus for your Contract or your plan documentation for further tax information.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

This Portfolio is not sold directly to the general public but instead is offered as an underlying investment option for Contracts and retirement plans and to other eligible investors. The Portfolio and the Adviser and its affiliates may make payments to a sponsoring insurance company (or its affiliates) or other financial intermediary for distribution and/or other services. These payments may create a conflict of interest by influencing the insurance company or other financial intermediary and your financial adviser to recommend the Portfolio over another investment or by influencing an insurance company to include the Portfolio as an underlying investment option in the Contract. The prospectus (or other offering document) for your Contract may contain additional information about these payments. Ask your financial adviser or visit your financial intermediary's website for more information.
